

Pressure Equipment Directive (PED)

- The Pressure Equipment Directive (PED) is European Legislation aimed at removing technical barriers to trade relating to the supply of pressure equipment throughout Europe.
- The PED is based on Essential Safety Requirements (ESRs) that govern design, manufacturing, inspection & testing.
- The PED affects most equipment that will be placed on the market in the European Economic Area (EEA) designed for pressures above 0.5 barg (7.25 psig).

Colmac Coil Manufacturing, Inc. is CE (PED) Certified for Industrial Refrigeration Coils.

PED certification allows us to ship industrial refrigeration coils and coolers to the European market and opens the door for European customers looking for quality products. This makes Colmac Coil innovative coil technologies available to European customers for the first time.

PED requires a notified body to inspect all work and to assure we have complied with applicable standards. Colmac Coil has achieved PED certification indicating its continued commitment to produce products that meet and exceed quality and safety standards required. Colmac Coil is now able to supply industrial coils built to the requirements of ASME, CRN, and CE (PED) for markets worldwide.
